How do I make science journal

Min Suk Chung

Department of Anatomy, Ajou University School of Medicine, Suwon, Korea

Dr. Scifun MS Chung (anatomy.co.kr)

Episode 1: How do I make SCI journal?

SCI is an abbreviation for science citation index. It's a great burden for scientist to publish their paper in SCI journal. SCI is also known as the acronym of spinal cord injury, since it bends and hurts scientist's waist. Plus, yet I don't know why, but it is also known as sexual contact injury.

Episode 6: Science and nature

I learned something at the science museum.

Science museum

The science museum differs from the natural history museum.

The science museum exhibits man-made things such as machines,

Natural history museum

but the natural history museum displays natural things like dinosaurs.

Her remarks reminded me of my preference.

Science Nature

Synthetic things in my youth, unprocessed things in old age.

I also thought of journals called Science and Nature.

Journal Science (US) Journal Nature (UK)

Does Science deal with artificial objects in US and Nature with pure ones in UK? I don't think so.

'Scientific' has stricter meaning than 'natural.' So scientists seem to have to be 'scientific' rather than 'natural.' But a veteran scientist is not only 'scientific' but also 'natural.' Two words are thought to be closely related with each other. Science is nature.

Episode 16: Unselfishness of beauties and scientists

An international beauty contest was held.

I participated in this competition to popularize my country's beauty.

I'm for the world peace.

But I think the real purpose is for the beauties to get famous and rich.

Beauties

I wrote a paper with a plausible purpose.

Experiment aim: To develop science that's beneficial to every people.

Participating a contest and doing research are both selfish and altruistic.

Actually the real one is for me to become famous and rich.

But there is no problem to this.

The beauty festival seems more contributing to the public than my investigation.

There is something called 'invisible hand' in capitalism. Executives, employees and customers only care about their own interests. But these selfish deeds are also altruistic since it can be helpful to other's benefits. Invisible hands turning selfishness into altruism exists in a beauty contest and science.

Episode 21: Pleasure of drawing comics

Actually there are very few people to read scientific articles. Suppose that the impact factor of a journal is 1. It means only one person to peruse an article in the journal. On the contrary, abundant persons enjoy comics regardless of their specialty. Hopefully, like me, more scientists will challenge the comics regarding to their scientific activities.

Editor's comments: The science cartoons by Dr. Min Suk Chung will be published in Science Editing from this issue. Dr. Chung, anatomist, has been famous not only for his work on Visible Korean project but also on science cartoons. The cartoons are generously provided by Dr. Chung, which are available from: <http://anatomy.co.kr/>.
