

Science Editing is indexed in the Scopus

Kihong Kim

Department of Energy Systems Research and Department of Physics, Ajou University, Suwon, Korea

In the previous issue, I announced that *Science Editing* began to be indexed in the Emerging Sources Citation Index. In this issue, I am very happy to inform our readers that *Science Editing* is now being indexed in the Scopus. In the last year, the Content Selection & Advisory Board of the Scopus informed us that it advised to include *Science Editing* to the Scopus database. Specifically, it acknowledged the good quality of our contents and considered its potential for growth in submissions and citations highly. I think it is a wonderful achievement considering that the journal is only four years old. I am very grateful to the editorial board members and to the authors who contributed valuable articles to *Science Editing*. Being indexed in the international databases such as the Scopus and the Emerging Sources Citation Index is very important because it will lead to a substantial increase of submissions of high quality manuscripts. I hope our readers continue to support *Science Editing* and strongly encourage editors, publishers, authors and reviewers all over the world to contribute their valuable manuscripts to *Science Editing*, thereby participating in developing it as a world class journal in the field of editing and publishing.

Conflict of Interest

No potential conflict of interest relevant to this article was reported.
